Diaceutics PLC
("Diaceutics" or "the Company" or "the Group")

Diaceutics approved by Centers for Medicare & Medicaid Services for enhanced data access

Diaceutics PLC (AIM: DXRX), the diagnostic commercialisation company, announces it has been approved by the Centers for Medicare & Medicaid Services (CMS) to receive US medical claims data at an increased frequency. The data will be integrated with Diaceutics' weekly aggregated Lab data within the DXRX diagnostic commercialisation platform, providing enhanced insight into the testing landscape for Precision Medicine.

By increasing the frequency of data feeds, Diaceutics' pharma and diagnostic clients can understand the evolving testing landscape in near real-time, empowering strategies to drive faster access to the right treatment. This is particularly important when considering the profound impact of the COVID pandemic on the testing for cancer and other diseases.

Diaceutics' data capabilities is one of the three key value drivers it has integrated into its unique DXRX platform alongside its global Lab network and product suite tailored for Precision testing. Through its powerful data analytics, machine learning and deep disease-level expertise and understanding, Diaceutics transforms data into valuable and actionable insights to build a comprehensive picture of a patient's diagnostic journey and eliminate barriers to treatment.

Peter Keeling, CEO of Diaceutics commented, "The most competitive companies in the diagnostic data space are those that not only can integrate very different large data sets but can deliver near real time customer insights. We have been working with the team at CMS for many years and this step up in data access helps supercharge our service in the market. Reducing the lag time for receipt of data will enable us to draw greater insight and value to help identify the best possible testing journey sooner than is currently possible, meaning treatment can be more timely and effective - a key goal for all involved in Precision Medicine particularly in the wake of COVID's profound disruption to testing for cancer and other rare diseases."
